

**UroFill™**  
PENILE GIRTH ENHANCEMENT

**UroFill™**  
PENILE GIRTH ENHANCEMENT

## INCREASE YOUR GIRTH

With a series of simple office based injections a man can obtain almost any penile girth he may desire.

### Where can I find **UroFill™**?

UroFill™ can only be administered by board certified urologists, plastic surgeons, cosmetic surgeons, and specialists in anti-aging and regenerative medicine. These specialists have been trained and certified through UroFill™ stringent training modules. Each of these specialists have a verified understanding of the patented technique and material used, making this procedure the only safe and efficacious way to achieve penile girth enhancement. Some facilities may advertise procedures similar to UroFill™ yet they rarely have the credentialing necessary to offer predictable and lasting results. Other techniques and fillers may not have the same peer review assessments as UroFill™.

## What is **UroFill**

UroFill™ is the innovative new approach that offers non-surgical penile girth enhancement using a proprietary dermal filler. The outcome is functionally and cosmetically appealing with durable results. The patented technique is both safe and effective. UroFill™ providers are board certified urologists, plastic surgeons, cosmetic surgeons, and specialists in anti-aging and regenerative medicine who have undergone comprehensive training resulting in safe, predictable and successful outcomes.

UroFill™ uses a dermal filler similar to tissue enhancement fillers used on the face, neck or other areas.

The UroFill™ technique is unique in its delivery of the material and its adaptation to the penis.

Now, a series of simple, office-based injections can provide almost any penile girth a man may desire. The injections are done under local anesthesia and the patient can return to work immediately after the procedure without restrictions.

## FAQs

### Am I a candidate for UroFill™?

UroFill™ can assist those men who want “a little more” or suffer from minor anxiety related to the size of the penis. A UroFill provider will work closely to match each patient’s personal expectations.

### How much girth does it add?

Because a patient’s penis may vary in length, the increase in girth after each round of UroFill™ will vary. Most patients will experience an increase of 0.25” to 0.50” with each staged injection. The staging process allows you, the patient, the opportunity to achieve your desired goal.

### Will it look natural?

With the help of your health care provider you should be able to accomplish almost any look you desire. The goal is to obtain increased girth without the appearance of anything unnatural. The biophysical properties of UroFill™ closely resemble the normal soft tissues of the penis.

### Are there any Side Effects?

One should expect bruising and some irregularities in the soft tissues of the penis for approximately one week. To date there have been no serious side effects or complications related to the UroFill™’s injection using UroFill™’s patented technique. Any irregularities are addressed on your follow-up visits for sculpting.
